

HOW DO TINCTURES WORK?

Most tinctures are taken by placing drops under the tongue and holding in the mouth for a few seconds, also known as sublingual administration. When you take a tincture sublingually, the cannabinoids are absorbed by the blood vessels lining the mouth, resulting in a quick onset of effects.

Tinctures can be felt as quickly as 15 to 30 minutes after dosing sublingually. Peak effects usually occur around 90 minutes after consumption and can last 3 to 6 hours, depending on the dose.

Tinctures can also be ingested orally, such as by swallowing. If you consume a tincture orally, the cannabinoids are absorbed through the stomach and gastrointestinal tract and take longer to enter the bloodstream.

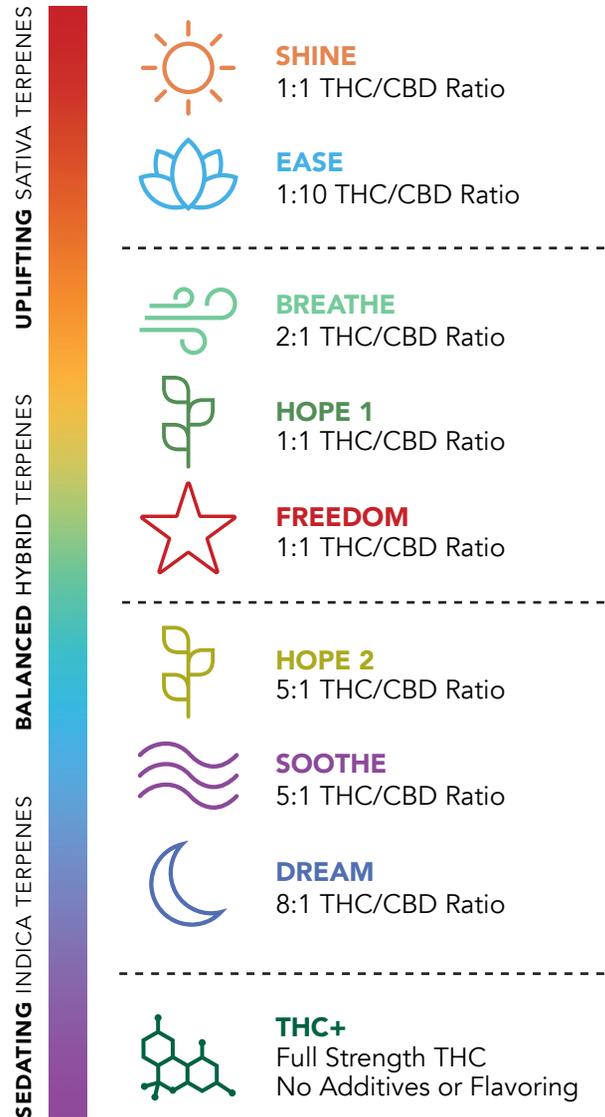

Dosing a tincture is easy to control because of the precise measurements on the dropper. A patient can consume a small amount, wait for the effects and take more if necessary.

As with any form of medical cannabis, you should start with a small dose to gauge how it makes you feel and to avoid the unwanted effects of over-medication. If you are taking a cannabis tincture for the first time, make sure to speak with your pharmacist to establish a dosage that's right for you.

TerrAscend NJ developed a proprietary line of medical cannabis formulations to help patients manage Four Universal Symptoms.

Pain	Anxiety
Sleeplessness	Lack of Energy/Focus

TINCTURES**

WHAT IS A MEDICAL CANNABIS TINCTURE?

Like many other forms of consumption, tinctures are made through the process of extraction. Terpenes and cannabinoids are separated from the plant material, leaving behind a liquid that contains a high concentration of active compounds. The liquid is bottled with a dropper and can be consumed sublingually or orally.

The tincture is one of the oldest methods of consuming cannabis as medicine. In fact, before prohibition, tinctures were the most common type of cannabis based medicine in the United States.

Medical cannabis tinctures are still popular among patients, especially those who need to take regular doses of cannabinoids throughout the day. Tinctures are one of the best methods for precise dosing, allowing patients to better manage the effects.

Like any other herbal tincture, a cannabis tincture is simply a concentrated liquid form of cannabis. Tinctures offer a simple and discreet way to receive the medical benefits of cannabis without needing to vaporize it first.

WHAT ARE THE BENEFITS OF USING TINCTURES?

There are many reasons why some patients prefer to use tinctures over other forms of consumption.

Discretion: Tinctures come in a glass bottle with a dropper, and they don't look or smell like cannabis.

Fast Onset: When taken sublingually, the effects can be felt in 15 to 30 minutes.

Controlled Dosing: Tinctures allow you to take a few drops at a time until you feel the desired effects.

Simpler Than Vaping: People that dislike or have a hard time vaping cannabis often find tinctures easier to use.

OUR TINCTURES

Work Great,
Taste Great.

Most of our tinctures are made with MCT oil, allowing medication to be absorbed into the body efficiently. HOPE™ is blended with organic olive oil.

HOPE™1

1:1 THC/CBD Ratio
Flavor: Chocolate Mint

HOPE™2

5:1 THC/CBD Ratio
Flavor: Grapefruit

DREAM

8:1 THC/CBD Ratio
Flavor: Vanilla

SHINE

1:1 THC/CBD Ratio
Flavor: Orange Citrus

EASE

1:10 THC/CBD Ratio
Flavor: Blackberry

SOOTHE

5:1 THC/CBD Ratio
Flavor: Raspberry

THC+

Full Strength THC
No Added Flavoring
